Automatic Diecutter without Stripping  
/ Automatic Diecutter with Stripping

### Main motor and clutch

- Main motor is from Siemens
- Use European design pneumatic clutch and rotary joint strictly follows European safety standard
- Equipped with European pneumatic air clutch lock-up system to ensure stability and reliability
- Equipped with pneumatic brake system to ensure stable brake and minimum attack on machine

### Feeder

- Equipped with German design **mms** non-stop feeding system supplied by Mabeg Machinery (Shanghai) Co.,Ltd.
- There are 2 suction cups for lifting paper and 2 suction cups for moving paper. Height and angle of suction heads are easily adjustable
- Micro-adjustment is available for transversal position of pile table; up and down of pile table is with double speed adjustment
- Maximum pile height up to 1300mm

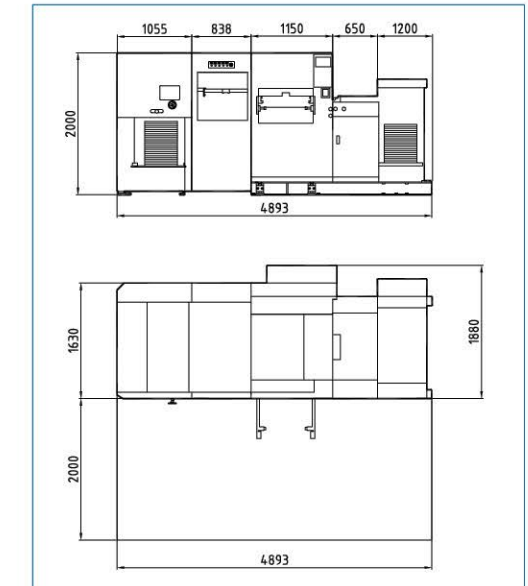

### Stripping Section

- 3-action movement structure with upper, middle and lower stripping frame facilitates die change
- Stripping pins or male/female die are available for different stripping jobs
- Match with the center-line registration system in diecutting section, the same system also apply to the stripping section to minimize changeover time. Accurate positioning can increase production efficiency
- The up/down movement of upper stripping frame is controlled by motor which makes adjustment easier
